

Student Exam Performance Predictor

Step-by-step results of running the Flask prediction app locally
— from launch to final maths score prediction.

1 Launch the Flask App

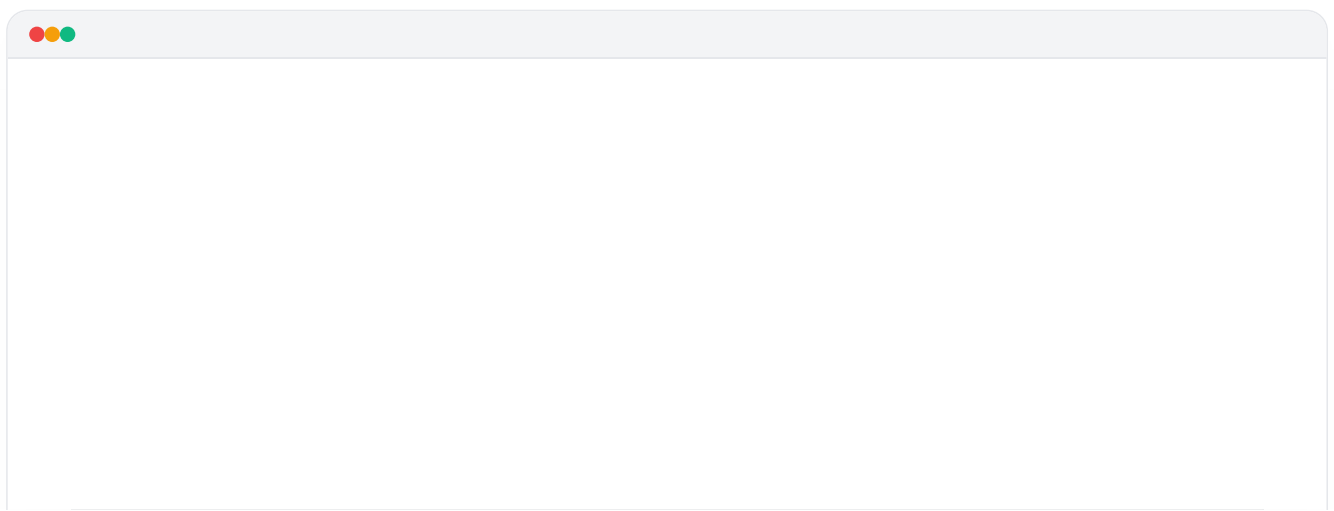

Run `python app.py` in the terminal — the Flask app will start.
Then open <http://127.0.0.1:8080/predictdata> in your local browser to open the app.

The screenshot shows a web browser window with the address bar displaying `127.0.0.1:8080/predictdata`. The page features a purple gradient background. In the center, there is a white card titled "Student Exam Performance Indicator" with the subtitle "Student Exam Performance Prediction". The card contains several form fields: "Gender" (dropdown menu), "Race or Ethnicity" (dropdown menu), "Parental Level of Education" (dropdown menu), "Lunch Type" (dropdown menu), "Test preparation Course" (dropdown menu), "Writing Score out of 100" (text input), and "Reading Score out of 100" (text input). Below these fields is a red button labeled "Predict your Maths Score". At the bottom of the card, there is a light blue box with the text "The Maths Score Prediction is".

2 Enter Details & Predict

Enter all the required details in the form and click on "**Predict your maths score**".

This block shows a placeholder for the next step in the process, which would involve entering details into the form and clicking the "Predict your maths score" button. The image shows a blank white area within a browser window frame.
